## Abstracts

According to our (Global Info Research) latest study, the global Carbon Emission Monitors market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Carbon Emission Monitors can continuously monitor the concentration and total emission of gaseous pollutants or particulate matter emitted by air pollution sources online, and monitor the front-end monitoring sites.

Global climate warming is the most significant environmental problem currently facing mankind and one of the most complex challenges facing mankind in the 21st century. It is also the key to the world's energy prospects and has become an important factor affecting the world's economy and politics. The emission of greenhouse gases, mainly carbon, caused by human activities is the main cause of global warming. Generally, continuous emission systems (CEMS) can be used to monitor carbon emissions. The European Commission launched the EU carbon emissions trading system in 2005 to officially carry out CO<sub>2</sub> emission monitoring.
