Abstracts

According to our (Global Info Research) latest study, the global Carbon Fiber Braided Products market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Carbon fiber is a long, thin strand of material about 0.0002-0.0004 in (0.005-0.010 mm) in diameter and composed mostly of carbon atoms. The carbon atoms are bonded together in microscopic crystals that are more or less aligned parallel to the long axis of the fiber. The crystal alignment makes the fiber incredibly strong for its size. Several thousand carbon fibers are twisted together to form a yarn, which may be used by itself or woven into a fabric. The yarn or fabric is combined with epoxy and wound or molded into shape to form various composite materials. Carbon fiber-reinforced composite materials are used to make aircraft carbon fiber compared to human hair and spacecraft parts, racing car bodies, golf club shafts, bicycle frames, fishing rods, automobile springs, sailboat masts, and many other components where light weight and high strength are needed.

Global Carbon Fiber market is projected to reach US\$ 1682.8 million in 2029, increasing from US\$ 1768.7 million in 2022, with the CAGR of -0.7% during the period of 2023 to 2029.

Demand from Industrial Materials and Aerospace are the major drivers for the industry.

North America is the main market, accounting for about 30%, followed by Europe at about 20%.
