Carbon fiber chamber is a high-strength, lightweight component used in flexographic printing presses to hold and distribute ink across the anilox roller. Made from carbon fiber materials, these chambers are durable and resistant to corrosion, making them ideal for handling a variety of ink types, including water-based, UV, and solvent-based inks. Carbon fiber chambers are valued for their stability and rigidity, which prevent flexing and deformation during high-speed printing, resulting in more consistent ink transfer and better print quality.
