Carbon fiber composite core wire is a new type of conductor for overhead transmission lines, which is composed of a conductive core composed of carbon fiber and an annular conductive layer. The core is a conductive core made of carbon fiber. The annular conductive layer is composed of copper, aluminum, and aluminum alloy wires tightly wrapped around the periphery of the core. An insulating layer can also be wrapped around the annular conductive layer. This structure makes the carbon fiber composite conductor have light weight, high tensile strength, good heat resistance, small thermal expansion coefficient, small sag at high temperature, high conductivity, low line loss, large carrying capacity, good corrosion resistance, and not easy to be covered with ice. and a series of advantages.
