Abstracts

According to our (Global Info Research) latest study, the global Carbon Fiber Composite Parts market size was valued at US$ 31229 million in 2025 and is forecast to a readjusted size of US$ 52964 million by 2032 with a CAGR of 7.8% during review period.

Carbon fiber composite parts are load-bearing or semi-structural components whose primary reinforcement is continuous or chopped carbon fiber in a thermoset or thermoplastic polymer matrix. They are produced through prepreg lay-up and autoclave curing, resin transfer or vacuum infusion, compression molding, filament winding, pultrusion, continuous lamination, and thermoplastic forming. The scope covers panels and shells, beams and frames, tubes and shafts, profiles, and complex molded structures. Key procurement parameters include specific strength and stiffness, fiber volume fraction, laminate architecture, resin temperature capability, dimensional tolerance, void content, surface quality, fatigue and impact performance, and production repeatability. Major end uses include aerospace and defense, automotive and ground transportation, wind energy, industrial machinery and robotics, and sports and leisure applications where lightweighting, rigidity, corrosion resistance, and design integration are critical. The cost structure is driven by carbon fiber and resin inputs, tooling amortization, forming cycle time, automation, non-destructive inspection, and secondary machining. The blended gross margin is approximately 28%.

Market Trends

Carbon fiber structural parts are moving from labor-intensive lay-up toward automated

fiber placement, automated cutting, robotic handling, and closed-loop process control. High-value aerospace structures continue to rely heavily on prepreg and autoclave systems, while automotive, unmanned aircraft, robotics, and industrial equipment prioritize shorter curing cycles and repeatable high-rate manufacturing. RTM, HP-RTM, compression molding, pultrusion, and continuous processes are expanding their addressable applications.

Thermoplastic CFRP is gaining attention for rapid forming, weldability, toughness, and recycling potential, with PEEK, PEKK, and PPS systems moving into aerospace secondary structures and premium transportation components. Structural design is also shifting from direct metal substitution toward functional integration that reduces fasteners, bonded interfaces, and total part count.

Market Dynamics

Drivers

Aircraft fleet renewal, defense and space investment, advanced air mobility, transportation lightweighting, larger wind systems, and faster industrial robots are expanding demand for high-specific-strength structures. Broader carbon fiber availability and maturing automated manufacturing equipment are also improving the economics of selected high-volume programs.

Restraints

Carbon fiber and high-performance resins remain more expensive than conventional metals, while complex tooling, long qualification cycles, non-destructive inspection, and precision machining add further upfront cost. Limited equipment commonality across processes can make unit economics difficult for smaller production runs.

Opportunities

High-rate thermoplastic forming, composite battery enclosures and vehicle structures, UAV and eVTOL airframes, lightweight robotic arms, wind spar components, and integrated aerospace structures provide attractive growth opportunities. Suppliers combining material design, structural simulation, process development, and stable serial quality are better positioned for higher-value programs.

Challenges

Key challenges include void and lay-up consistency, joining and repair, automation of complex geometries, in-line quality monitoring, and life prediction. As lifecycle requirements tighten, scrap-loop closure, disassemblable joining, and recycled carbon fiber utilization are becoming additional engineering constraints.

Industry Chain Analysis

Upstream inputs include PAN-based carbon fiber, resins, prepregs, woven and multiaxial reinforcements, core materials, process consumables, tooling, and forming equipment. Midstream activities cover structural design, lay-up, weaving or braiding, molding and curing, machining, bonding and assembly, surface finishing, and non-destructive inspection. Downstream demand comes primarily from aerospace and defense, automotive and transportation, wind energy, industrial machinery and robotics, and sports and leisure OEMs. Value creation increasingly depends on reinforcement architecture, process-window control, qualification capability, and repeatable serial production rather than raw material content alone.

Segment Insights

By manufacturing process, autoclave prepreg remains well suited to high-performance, highly reliable, complex aerospace laminates. RTM and infusion fit large or closed complex structures, compression molding supports medium-to-high-rate automotive and industrial components, while filament winding, pultrusion, and continuous lamination offer strong efficiency for shafts, tubes, profiles, and long structural members. By matrix system, thermosets remain the mainstream while thermoplastics have stronger growth momentum.

Downstream Market Opportunities

Aerospace and defense form the core high-value demand base, where qualification requirements and long program lives create substantial entry barriers. Automotive and ground transportation emphasize cycle time and cost, wind energy emphasizes long high-stiffness structures, industrial machinery and robotics value low inertia, positioning

+357 96 030922
info@marketpublishers.com

accuracy, and fatigue resistance, while sports and leisure applications can adopt new materials and processes more quickly.

Regional Insights

Asia Pacific is a major center for capacity expansion and incremental demand, with China continuing to build carbon fiber supply and downstream use in wind, rail, unmanned systems, and industrial applications. North America retains a strong high-value position in aerospace, defense, and commercial space, while Europe has a broad industrial base across aerospace, automotive, wind energy, and composite recycling technologies.

Competitive Landscape Analysis

The market combines vertically integrated material suppliers, specialized aerospace Tier suppliers, and regional custom composite manufacturers. Competitive strength depends less on owning a single forming process and more on the combined capability of structural design, material selection, automation, qualification, non-destructive inspection, and delivery consistency. High-end aerospace and defense programs are relatively concentrated, while automotive and industrial composite-part supply remains more fragmented.

Report Scope

This report is a detailed and comprehensive analysis for global Carbon Fiber Composite Parts market. Both quantitative and qualitative analyses are presented by manufacturers, by region & country, by Type and by Application. As the market is constantly changing, this report explores the competition, supply and demand trends, as well as key factors that contribute to its changing demands across many markets. Company profiles and product examples of selected competitors, along with market share estimates of some of the selected leaders for the year 2025, are provided.

Key Features:

Global Carbon Fiber Composite Parts market size and forecasts, in consumption value

($ Million), sales quantity (Units), and average selling prices (US$/Unit), 2021-2032

Global Carbon Fiber Composite Parts market size and forecasts by region and country, in consumption value ($ Million), sales quantity (Units), and average selling prices (US$/Unit), 2021-2032

Global Carbon Fiber Composite Parts market size and forecasts, by Type and by Application, in consumption value ($ Million), sales quantity (Units), and average selling prices (US$/Unit), 2021-2032

Global Carbon Fiber Composite Parts market shares of main players, shipments in revenue ($ Million), sales quantity (Units), and ASP (US$/Unit), 2021-2026

The Primary Objectives in This Report Are:

To determine the size of the total market opportunity of global and key countries

To assess the growth potential for Carbon Fiber Composite Parts

To forecast future growth in each product and end-use market

To assess competitive factors affecting the marketplace

This report profiles key players in the global Carbon Fiber Composite Parts market based on the following parameters - company overview, sales quantity, revenue, price, gross margin, product portfolio, geographical presence, and key developments. Key companies covered as a part of this study include SGL Carbon, Albany Engineered Composites, GKN Aerospace, FACC, Daher, Quickstep, CPC, Bucci Composites, Action Composites, Mubea, etc.

This report also provides key insights about market drivers, restraints, opportunities, new product launches or approvals.

Carbon Fiber Composite Parts market is split by Type and by Application. For the period 2021-2032, the growth among segments provides accurate calculations and forecasts for consumption value by Type, and by Application in terms of volume and value. This analysis can help you expand your business by targeting qualified niche markets.

11.3.3 Turkey Market Size and Forecast (2021-2032)
11.3.4 Egypt Market Size and Forecast (2021-2032)
11.3.5 Saudi Arabia Market Size and Forecast (2021-2032)
11.3.6 South Africa Market Size and Forecast (2021-2032)

12 MARKET DYNAMICS

12.1 Carbon Fiber Composite Parts Market Drivers
12.2 Carbon Fiber Composite Parts Market Restraints
12.3 Carbon Fiber Composite Parts Trends Analysis
12.4 Porters Five Forces Analysis
12.4.1 Threat of New Entrants
12.4.2 Bargaining Power of Suppliers
12.4.3 Bargaining Power of Buyers
12.4.4 Threat of Substitutes
12.4.5 Competitive Rivalry

13 RAW MATERIAL AND INDUSTRY CHAIN

13.1 Raw Material of Carbon Fiber Composite Parts and Key Manufacturers
13.2 Manufacturing Costs Percentage of Carbon Fiber Composite Parts
13.3 Carbon Fiber Composite Parts Production Process
13.4 Industry Value Chain Analysis

14 SHIPMENTS BY DISTRIBUTION CHANNEL

14.1 Sales Channel
  14.1.1 Direct to End-User
  14.1.2 Distributors
14.2 Carbon Fiber Composite Parts Typical Distributors
14.3 Carbon Fiber Composite Parts Typical Customers
