According to our (Global Info Research) latest study, the global Carbon Fiber Prepreg market size was valued at USD 6023.8 million in 2023 and is forecast to a readjusted size of USD 8904.4 million by 2030 with a CAGR of 5.7% during review period.

Carbon fibers are fibers composed mostly of carbon atoms and have a diameter of about 3-15 micrometers. The carbon atoms are bonded together in crystals, which are aligned parallel to the long axis of the fiber. This alignment gives the fiber a high strength-to-volume ratio. Prepregs are materials consisting of reinforcing fibers that are pre-impregnated with thermoset and thermoplastic resins. These products are cured under high temperature and pressure and have properties that can be useful for a wide range of applications.

The aerospace & defense segment is leading the carbon fiber prepreg market, in terms of value and volume. Carbon fiber prepregs are lightweight and offer resistance to moisture, chemicals, and corrosion. They exhibit increased operational stability at high temperatures in comparison to materials made of other conventional materials, such as thermoset composites and metallic alloys. As such, carbon fiber prepregs are being increasingly used in the aerospace & defense industry.
