## Abstracts

According to our (Global Info Research) latest study, the global Carbon Fiber Propeller market size was valued at USD 611.2 million in 2022 and is forecast to a readjusted size of USD 2895.2 million by 2029 with a CAGR of 24.9% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The weight of the carbon fiber propeller is very small, and the resistance to be overcome when driving is small, which can not only meet the high-speed driving needs of airplanes and other aircraft, but also save fuel; and the strength and tensile capacity of carbon fiber are better than metal, which can meet the needs of aviation. Propeller requirements for strength and plasticity. In addition, carbon fiber propellers also have many advantages such as corrosion resistance, moisture resistance, extreme temperature resistance, friction resistance, and longer service life, and are increasingly becoming the new favorite in the aircraft field.
