## Abstracts

The global Carbon Fiber Propeller market size is expected to reach \$ 2895.2 million by 2029, rising at a market growth of 24.9% CAGR during the forecast period (2023-2029).

The weight of the carbon fiber propeller is very small, and the resistance to be overcome when driving is small, which can not only meet the high-speed driving needs of airplanes and other aircraft, but also save fuel; and the strength and tensile capacity of carbon fiber are better than metal, which can meet the needs of aviation. Propeller requirements for strength and plasticity. In addition, carbon fiber propellers also have many advantages such as corrosion resistance, moisture resistance, extreme temperature resistance, friction resistance, and longer service life, and are increasingly becoming the new favorite in the aircraft field.
