Abstracts

According to our (Global Info Research) latest study, the global Carbon Fiber Recycling market size was valued at USD 94 million in 2023 and is forecast to a readjusted size of USD 223.3 million by 2030 with a CAGR of 13.1% during review period.

In addition to the expensive production process, carbon fibre has a further drawback – it is difficult to recycle. This is because in the production process of carbon fibre, long acrylic fibres are bonded to a polymer, which strongly resembles glue. That takes high temperatures, of up to hundreds of degrees Celsius, and powerful forces. This means the polymers are not at all easy to separate during the recycling process. It can be done, but requires a chemical or mechanical process. Another option is to burn off the polymers.

Global core carbon fiber recycling players include Gen 2 Carbon, Hadeq Recycling, Karborek Recycling Carbon Fibres etc. The top 2 companies hold a share about 28%. Europe is the largest market, with a share about 48%, followed by North America with the share about 29%. In terms of product, chopped carbon fiber recycling is the largest segment, with a share over 76%. And in terms of application, the largest application is automobiles, followed by sporting goods.
