## Abstracts

According to our (Global Info Research) latest study, the global Carbon Fiber Recycling and Reuse market size was valued at USD 127.6 million in 2022 and is forecast to a readjusted size of USD 284.3 million by 2029 with a CAGR of 12.1% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Carbon fiber is a lightweight, high-strength material that is commonly used in industries such as aerospace, automotive, and sporting goods. However, the production of carbon fiber involves significant energy and resource consumption, and the disposal of carbon fiber waste can also pose environmental challenges. Therefore, recycling and reuse of carbon fiber can help reduce the environmental impact of its production and waste. Carbon fiber recycling involves the process of breaking down and separating carbon fiber components from the waste material, which can be either in the form of finished products or manufacturing scrap. The recycled carbon fiber can be used in a variety of applications, such as reinforcing plastics, composites, and concrete.
