### **Abstracts**

The global Carbon Fiber Recycling and Reuse market size is expected to reach \$ 284.3 million by 2029, rising at a market growth of 12.1% CAGR during the forecast period (2023-2029).

Carbon fiber is a lightweight, high-strength material that is commonly used in industries such as aerospace, automotive, and sporting goods. However, the production of carbon fiber involves significant energy and resource consumption, and the disposal of carbon fiber waste can also pose environmental challenges. Therefore, recycling and reuse of carbon fiber can help reduce the environmental impact of its production and waste. Carbon fiber recycling involves the process of breaking down and separating carbon fiber components from the waste material, which can be either in the form of finished products or manufacturing scrap. The recycled carbon fiber can be used in a variety of applications, such as reinforcing plastics, composites, and concrete.

This report studies the global Carbon Fiber Recycling and Reuse demand, key companies, and key regions.
