Abstracts

The global Carbon Fiber Reinforced Composites market size is expected to reach \$ 15190 million by 2032, rising at a market growth of 10.2% CAGR during the forecast period (2026-2032).

In 2025, global production of carbon fiber reinforced composites reached 131,000 tons, with an average selling price of US\$57.2 per kilogram. Global annual production capacity for carbon fiber reinforced composites is approximately 200,000 tons, with a gross profit margin of approximately 20.2%. Carbon fiber reinforced composites (CFRP) are composite materials composed of carbon fiber as the reinforcing phase and a matrix material (usually a thermosetting resin such as epoxy resin, or a thermoplastic resin such as PE, PPS, etc.) as the matrix. It combines the high strength/high modulus of carbon fiber with the formability and impact toughness of the matrix material, forming a high-performance, lightweight material. The upstream of the carbon fiber reinforced composites industry chain includes polyacrylonitrile, asphalt, and viscose fiber, the midstream consists of carbon fiber reinforced composites manufacturers, and the downstream mainly comprises the automotive, aerospace, military, and sports industries.

This report studies the global Carbon Fiber Reinforced Composites production, demand, key manufacturers, and key regions.
