According to our (Global Info Research) latest study, the global Carbon Fiber-reinforced Plastic Strips market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Carbon fiber reinforced plastic strips are high-performance reinforcement materials made of carbon fiber and resin matrix. This material combines the high strength and high rigidity of carbon fiber with the light weight and corrosion resistance of plastic, and is widely used in applications that require light weight and high strength. With the development of science and technology, CFRP strips are moving towards higher performance and wider application areas. Future research may focus on improving the damage tolerance of CFRP strips, reducing costs, and improving production efficiency. At the same time, with the improvement of environmental awareness, bio-based or recyclable CFRP strips will also become a research hotspot.
