Abstracts

According to our (Global Info Research) latest study, the global Carbon Fiber Reinforced Plastics Propeller market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Carbon Fiber Reinforced Plastics Propeller is a propulsion device made of carbon fiber reinforced plastic. Carbon fiber is a very light yet very strong material, so it is widely used in aerospace, marine, and other applications that require lightweight, high-strength materials. After combining carbon fiber with appropriate plastic resins to make composite materials, lightweight, strong, and well-rigid parts can be produced. CFRP propellers have higher specific strength (material strength per unit mass) than traditional metal propellers, and are more Good fatigue characteristics and corrosion resistance. Additionally, by leveraging the strength of CFRP, thinner propellers with smaller blade areas can be produced, potentially increasing propeller efficiency.
