Abstracts

The global Carbon Fiber Reinforced PPS Laminate market size is expected to reach \$ 117 million by 2032, rising at a market growth of 5.8% CAGR during the forecast period (2026-2032).

Carbon fiber reinforced PPS (CF/PPS) laminate is a high-performance composite material using carbon fiber as reinforcement and thermoplastic polyphenylene sulfide (PPS) as the matrix. It is manufactured through a lamination and curing process and features lightweight, high strength, high temperature resistance, chemical corrosion resistance, recyclability, and impact resistance. It is commonly used in high-end fields such as aerospace and automotive.

The CF/PPS laminate industry chain embodies the deep integration of high-performance specialty engineering plastics and advanced composite materials. The upstream consists of two core industries: high-performance carbon fiber (usually continuous fiber or fabric) and PPS resin. Downstream applications target the high-end market for lightweighting and environmental corrosion resistance.

CF/PPS laminate is primarily supplied to high-end projects in aerospace and other sectors. Global sales are projected to reach approximately 200,000 square meters in 2025, with an average market price of approximately US\$388 per square meter. The industry's average gross profit margin is between 20% and 30%.
