Abstracts

The global Carbon Floating Seal market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

With carbon floating seals, the main advantages are the physical strength and chemical resistance of the material. Graphite also has the advantage of increased sliding capacity due to its tribology, which results in a longer service life (compared to polymers) and is resistant to high temperatures. Applications up to 800°C are sealed with carbon floating seals. Caused by its friction, this results in a longer service life (compared to polymers) and is resistant to high temperatures. High pressure applications are sealed with armoured carbon rings (non-split) with high mechanical strength.

This report studies the global Carbon Floating Seal production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Carbon Floating Seal, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
