Abstracts

The global Carbon Footprint Certification Services market size is expected to reach \$ 2289 million by 2032, rising at a market growth of 8.8% CAGR during the forecast period (2026-2032).

Carbon footprint certification service is a professional assessment, verification and reporting service designed to quantify and manage the total amount of greenhouse gases (GHG) emitted by a product, service or organization throughout its life cycle. This service uses scientific methods and tools to help entities such as companies, government agencies and non-profit organizations understand their impact on the environment and promote measures to reduce carbon emissions in order to achieve sustainable development goals.

The demand for carbon footprint certification services continues to grow, primarily driven by multiple factors, including the promotion of 'dual carbon' policies in various countries around the world, the gradual implementation of international green trade barriers, the mandatory requirements of large enterprises for emission reduction in their supply chains, the high attention paid to ESG performance by capital markets and consumers, and enterprises' own efforts to identify energy-saving and cost-reduction opportunities through quantified emissions. At the same time, the differentiated value of carbon labels and green product certification in marketing is becoming increasingly prominent, further prompting various organizations to proactively seek authoritative third-party carbon footprint verification and certification.
