According to our (Global Info Research) latest study, the global Carbon-free Ammonia market size was valued at USD 52 million in 2022 and is forecast to a readjusted size of USD 5606.7 million by 2029 with a CAGR of 95.3% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Green ammonia is crucial to tackle the existential challenges of producing enough food to feed a growing global population and generating CO₂-free energy. Ammonia (NH₃), a compound of nitrogen and hydrogen, is mainly used to manufacture fertilizers. 80% of the annual global production of over 170 million metric tons is used in this way. And that should become even more in the next few years. But ammonia can also be burnt to make electricity with air and water the only emissions, or used as a storage medium for energy generated from renewable sources.

This report is a detailed and comprehensive analysis for global Carbon-free Ammonia market. Both quantitative and qualitative analyses are presented by manufacturers, by region & country, by Type and by Application. As the market is constantly changing, this report explores the competition, supply and demand trends, as well as key factors that contribute to its changing demands across many markets.
