Carbon-free rubber hoses are specially formulated rubber hoses. Their core characteristic is that they are made from natural or synthetic rubber and contain no carbon, giving them excellent insulation properties, high-temperature resistance, aging resistance, and resistance to radiant heat.

In 2025, global production of carbon-free rubber hoses reached 341 million meters, with an average selling price of US\$519 per kilometer. Production capacity was approximately 500 million meters, and the industry's gross profit margin was approximately 10%?20%. Cost structure: direct materials account for approximately 70%, manufacturing costs account for approximately 22%, and labor costs account for approximately 8%. Industry chain: upstream consists of rubber raw materials, inorganic fillers, and additives; downstream is mainly used in industrial electric furnaces.
