Abstracts

Carbon Brush is a device which conducts current between stationary wires and moving parts, most commonly in a rotating shaft. Its basic applications are electric motors, alternators and electric generators.

The characteristics of carbon brush material measured by carbon brush manufacturers are as follows: self-lubrication, conductivity, durability, and rid ability during sliding contact.

Scope of the Report

This report focuses on the Carbon Graphite Brush in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The environment of carbon brush industry, as well the manufacturing industry, has a large scale of uncertainties in next years, caused by the downward growth rate of Chinese economy and complicated global economic situation. Accompanied with limited demand growth, and more and more enterprises entering this market, the competition will be stricter. In this case, the ordinary carbon brush products will have less profit and sales than high qualified products.

There is still certain space for the demand of carbon brush, whereas it lacks of high-end products, while the ordinary products are over supplied. In the current situation and predictable future, China market will import a huge volume of high-end carbon brushed to feed the demand. Meanwhile the local manufacturers of ordinary products will attempt to expand the overseas market to transfer the surplus productive capacity. Despite the presence of competitive industrial environment, clear, investors are still

optimistic about this area, with the clear trend of global market. The future will have more investment entering the field.

The worldwide market for Carbon Graphite Brush is expected to grow at a CAGR of roughly 2.2% over the next five years, will reach 2070 million US\$ in 2023, from 1830 million US\$ in 2017, according to a new GIR (Global Info Research) study.
