Abstracts

The global Carbon Monoxide (CO) Catalyst market size is expected to reach $ 4441 million by 2032, rising at a market growth of 3.4% CAGR during the forecast period (2026-2032).

Carbon monoxide (CO) catalysts are catalytic materials that promote the chemical conversion of carbon monoxide. Their most common function is to oxidize toxic CO to carbon dioxide (CO?) at relatively low temperatures, thereby achieving waste gas purification, air purification, or gas purification. Their active components typically include precious metal catalysts such as platinum, palladium, gold, and rhodium, or transition metal oxides such as copper manganese oxides, cobalt oxides, iron oxides, and cerium-zirconium oxides. CO catalysts are widely used in automotive exhaust treatment, industrial waste gas treatment, gas turbine emission control, and air purification in mines and confined spaces. In 2025, global sales of carbon monoxide (CO) catalysts were approximately 58.655 million liters, with prices mainly fluctuating with precious metal prices; the price in 2025 was approximately US$56.1 per liter.

In recent years, with increasingly stringent global environmental regulations and rising demands for industrial emission control, carbon monoxide (CO) catalysts, as important materials for gas purification and exhaust gas treatment, have maintained stable market demand growth. CO catalysts primarily convert toxic carbon monoxide into carbon dioxide through catalytic oxidation reactions, and are widely used in industrial waste gas treatment, automotive exhaust treatment, gas purification, and energy systems. Driven by the ?dual carbon? goals and the trend towards cleaner production, the CO catalyst market is experiencing sustained development opportunities. Diesel vehicle exhaust treatment is the primary application area for CO catalysts.

From a demand structure perspective, diesel vehicle exhaust treatment is the most significant application area for CO catalysts. With increased environmental investment from industrial enterprises, the demand for exhaust gas purification in industries such as steel, chemicals, metallurgy, and waste incineration is gradually rising, leading to a sustained increase in demand for high-efficiency, long-life catalysts. In recent years, the development of gas turbines, hydrogen energy, and gas purification systems has also created new application opportunities for CO catalysts.

In terms of product structure, precious metal catalysts and non-precious metal catalysts are the main types. Among them, precious metal catalysts, represented by platinum and palladium, possess characteristics such as high activity and excellent low-temperature ignition performance, and are widely used in high-end exhaust gas treatment fields; non-precious metal systems such as copper, manganese, and iron have cost advantages in industrial waste gas treatment. Technologically, the industry is developing towards higher activity, lower temperature, and longer lifespan, while simultaneously improving catalytic efficiency and resistance to poisoning by optimizing carrier structure and dispersion processes.

In terms of the industry chain, upstream includes suppliers of materials such as precious metals, alumina, and honeycomb ceramics; midstream consists of catalyst manufacturers; and downstream comprises environmental engineering companies, automakers, and industrial end-users. The industry as a whole has high technical barriers, especially in formulation design, precious metal loading, and durability control, which place high demands on companies' R&D capabilities. With continuously upgrading environmental standards, the proportion of high-performance catalyst products continues to increase.

From a regional market perspective, the Asia-Pacific region is the world's largest CO catalyst market, benefiting from rapid growth in industrial scale and environmental governance needs; the European and North American markets maintain stable demand in terms of automotive exhaust emission standards and high-end industrial treatment; and the Middle East and Latin America markets are gradually releasing demand driven by industrialization and environmental investment. Overall, the global market exhibits a development pattern of parallel growth driven by environmental protection and technological upgrades.

Looking ahead, the global CO catalyst market will be driven by three core factors: first, the continued growth in demand for industrial environmental governance; second, the upgrading of emission standards for automobiles and energy systems; and third, the

continuous advancement of catalytic material technology.

This report studies the global Carbon Monoxide (CO) Catalyst production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Carbon Monoxide (CO) Catalyst and provides market size (US$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of Carbon Monoxide (CO) Catalyst that contribute to its increasing demand across many markets.

Highlights and key features of the study

Global Carbon Monoxide (CO) Catalyst total production and demand, 2021-2032, (L)
Global Carbon Monoxide (CO) Catalyst total production value, 2021-2032, (USD Million)
Global Carbon Monoxide (CO) Catalyst production by region & country, production, value, CAGR, 2021-2032, (USD Million) & (L), (based on production site)
Global Carbon Monoxide (CO) Catalyst consumption by region & country, CAGR, 2021-2032 & (L)
U.S. VS China: Carbon Monoxide (CO) Catalyst domestic production, consumption, key domestic manufacturers and share
Global Carbon Monoxide (CO) Catalyst production by manufacturer, production, price, value and market share 2021-2026, (USD Million) & (L)
Global Carbon Monoxide (CO) Catalyst production by Type, production, value, CAGR, 2021-2032, (USD Million) & (L)
Global Carbon Monoxide (CO) Catalyst production by Application, production, value, CAGR, 2021-2032, (USD Million) & (L)

This report profiles key players in the global Carbon Monoxide (CO) Catalyst market based on the following parameters - company overview, production, value, price, gross margin, product portfolio, geographical presence, and key developments. Key companies covered as a part of this study include Johnson Matthey, Umicore, BASF, Cummins, Yunnan Precious Catalyst, Weifu Environmental Protection, SINOCATALYST Environmental Protection, ActBlue, Kailong High Technology, Shandong Yuanlin Silicon Ceramic New Materials, etc.

This report also provides key insights about market drivers, restraints, opportunities, new product launches or approvals.
