Abstracts

The global Carbon Monoxide market size is expected to reach \$ 5568 million by 2032, rising at a market growth of 3.9% CAGR during the forecast period (2026-2032).

Carbon monoxide is a colorless, odorless, flammable, toxic gas. High-purity carbon monoxide that is dry and free of sulfur compounds is normally noncorrosive to metals at atmospheric pressure. Lower-purity grades containing moisture, sulfur compounds and other impurities can form toxic metal carbonyls and can cause stress corrosion cracking in carbon steels at elevated pressures. Chemically, carbon monoxide is stable but can act as a strong reducing agent at elevated temperatures. In the report, the data is based on industrial production of carbon monoxide, without by-product. In 2025, global Carbon Monoxide production reached approximately 12854 K MT.

A primary driver of the carbon monoxide market is its role as a core feedstock in the chemical industry. Carbon monoxide is widely used to produce methanol, acetic acid, synthesis gas derivatives, and other intermediate chemicals that feed into plastics, solvents, fuels, and specialty materials. As downstream chemical manufacturing expands, especially in regions adding industrial and petrochemical capacity, demand for carbon monoxide rises because it remains a fundamental building block in large-volume synthesis routes.

A second major driver is demand from the metals and materials sector. Carbon monoxide functions as an effective reducing agent in metallurgical processing and is also used in the production of high-purity powdered metals through metal carbonyl chemistry. This supports consumption in applications tied to steel, nonferrous metals, advanced alloys, and precision material manufacturing, where process efficiency and purity are important. As industrial production and specialty materials demand increase,

carbon monoxide remains relevant in both bulk and high-value metallurgical operations.

Another important market driver is its use in specialty and high-tech applications, including electronics-related processes and high-purity gas supply chains. Carbon monoxide is used in certain highly controlled industrial environments where purity, reaction control, or specific gas properties are required, and this supports niche but valuable demand beyond traditional bulk chemistry. As semiconductor, solar, and advanced manufacturing ecosystems continue to develop, these specialized applications help broaden the market base for carbon monoxide alongside its established chemical and metallurgical uses.

This report studies the global Carbon Monoxide production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Carbon Monoxide and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year.
