Abstracts

The global Carbon Nanotube Adhesive Sheet market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Carbon nanotube bonded sheets, referring to their thermal conductivity of up to 100 W/mK, carbon nanotubes have high thermal conductivity and are promising candidates for heat dissipation from heat sources such as semiconductor devices. However, their fragile nature makes them impractical for many applications. To address this problem, a technique has been commercially developed to laminate vertically aligned carbon nanotubes while maintaining their original properties of high thermal conductivity and flexibility, as well as a technique to bond them with sufficient adhesive strength. This technology facilitates the cutting and handling of carbon nanotube sheets, allowing them to be used as heat dissipation materials, such as automotive power modules for electric vehicles(EVs).

This report studies the global Carbon Nanotube Adhesive Sheet production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Carbon Nanotube Adhesive Sheet, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
