## Abstracts

According to our (Global Info Research) latest study, the global Carbon Fiber Fishing Rods Materials market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

It is generally said that 'thin, light and strong' fishing rods are the best. The use that is highly required is 'High rigidity and Weight reduction.' That's because fishing rods must be appropriately sized for ease of holding and light, very rigid, easy to tackle, feel the response from the fish, and take in the fish. In particular, 'sweetfish fishing rods' used in Japan from ancient times are long and heavy (bamboo rods each span 6.2 m, weigh 1.5 kg and have an outer diameter of approx. 50 mm), and must be handled with both hands, which is fun but a lot of trouble. With the development of carbon fiber offering high specific modulus of elasticity, however, these fishing rods have become lighter and are now called 'carbon rods' and considered premium/sports fishing rods along with 'crucian carp rods and mountain stream rods.'

The research process involved the study of various factors affecting the industry, including the government policy, market environment, competitive landscape, historical data, present trends in the market, technological innovation, upcoming technologies and the technical progress in related industry, and market risks, opportunities, market barriers and challenges.
