Abstracts

Multi-wall carbon nanotubes are the largest product segment, accounting for more than 92% share of the global carbon nanotubes market in 2015. Multi-wall carbon nanotubes consist of multiple layers of graphite/carbon that are superimposed and rolled one over the other to form a cylindrical and tubular structure.

However, a number of issues, including high costs, inconsistent quality across the supply chain, dispersion and compatibility with matrix materials, and toxicology still need to be addressed. Once these issues are resolved, growth in global CNTs demand is expected to accelerate in the next five years.
