## Abstracts

According to our (Global Info Research) latest study, the global Carbon Nanotube Cold Cathode X-Ray Tube market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Carbon nanotube cold cathode X-ray tube is an X-ray tube based on carbon nanotubes, which can be used as a substitute for tungsten filament X-ray tube (the core component of X-ray equipment). It can reduce radiation by about 30%, and solves the problem that materials such as tungsten wire cannot be used for medical imaging in some cases after X-ray equipment is powered on. It is expected to be used in portable mobile devices for medical X-ray photography in the future. Nanotube cold cathode X-ray tubes have the advantages of small size, light weight, and low radiation dose, and have broad application prospects in nuclear power ray detection.
