According to our (Global Info Research) latest study, the global Carbon Nanotube Conductive Slurry market size was valued at US\$ 268 million in 2025 and is forecast to a readjusted size of US\$ 576 million by 2032 with a CAGR of 11.7% during review period.

CNT conductive slurry mainly consists of high-purity carbon nanotubes and NMP solvent, refined through a multi-stage continuous nano-dispersion process. In recent years, CNT conductive slurry has been widely used as a conductive additive in electrode materials. Leveraging the excellent electrical conductivity and one-dimensional tubular nanostructure of carbon nanotubes, it can form an efficient conductive network within cathode materials, significantly enhancing the utilization of active materials' capacity, thereby improving the energy density and cycle life of batteries.

The market for carbon nanotube (CNT) conductive slurry is poised for robust growth, driven by increasing demand in advanced battery electrodes, flexible electronics, and conductive coatings. CNT slurry offers superior electrical conductivity, mechanical flexibility, and chemical stability compared to traditional conductive materials. Key consumption markets include China, the United States, and Europe, where the expansion of electric vehicles, wearable devices, and next-generation energy storage technologies fuels adoption. As manufacturers seek to enhance device performance and reduce weight, CNT conductive slurry is becoming an essential material in cutting-edge industrial applications.
