Abstracts

Carbon nanotubes (CNTs) are allotropes of carbon having cylindrical nanostructure. Carbon Nanotube is a tube-shaped material made up of carbon molecule, having a diameter of approximately nanometer (one-billionth of a meter or one ten-thousandth of the thickness of a human hair). Carbon nanotubes has many different structure, depending on length, thickness and type of helicity (projection of the spin on direction of momentum), and number of layers. All the carbon nanotubes are made up of similar graphite sheet. However, electrical characteristic of the carbon nanotubes (acting as metals or semiconductor) depends on the structure it exhibits. Carbon nanotubes exhibit excellent mechanical strength, comparable to graphite.

SCOPE OF THE REPORT:

This report focuses on the Carbon Nanotube in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Carbon nanotubes having superior property and adaptability qualities compared to other material is driving the overall demand for carbon nanotube materials. Additionally, growing demand for carbon nanotubes materials by different end-user industries such as, electrical and electronics, energy, healthcare, automobile, aerospace is expected to drive the global market. This has influenced the manufacturing companies to increase their productivity of carbon nanotube to withstand the increasing global demand. Also, increasing industrialization, especially in the developing nations of Asia Pacific and Middle-East countries is further expected to provide ample growth opportunity for the manufacturing companies to establish their market in these regions.

The worldwide market for Carbon Nanotube is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
