Abstracts

Carbon nanotube NMP dispersant is a dispersant suitable for dispersing carbon nanotubes in NMP solvents. Carbon nanotubes (CNTs) are highly hydrophilic and have extremely high surface energy. They are difficult to effectively disperse in conventional solvents and are prone to agglomeration. Dispersants are required to help stabilize the carbon nanotube dispersion system. NMP has high polarity and solubility, and can interact with the surface of carbon nanotubes to form a molecular layer, thereby effectively dispersing carbon nanotubes. At the same time, NMP also has lower vapor pressure and better thermal stability, making it more stable and reliable during the dispersion process.
