According to our (Global Info Research) latest study, the global Carbon Nanotube Paper market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Carbon nanotube paper (bucky paper) is composed of a certain length of disordered carbon nanotubes, which has a specific surface area much larger than carbon fiber paper, strength similar to that of thermally conductive graphite sheets, good electrical and thermal conductivity and chemical stability, and is used in fuel cells. Gas diffusion layers, electrochemical supercapacitors, lithium-ion battery cathodes, heat dissipation pads for high-power electronic devices, and high-performance polymer composite materials all have great application value. It is necessary to prepare bucky papers with different conductivity and different areas and shapes required by different application environments.

The upstream industry chain of Bucky Paper: the main raw material of carbon nanotube paper is carbon nanotubes, and the downstream industry chain: the main application fields of carbon nanotube paper include lithium batteries, conductive plastics, electromagnetic shielding, biosensors, medical equipment, etc. These fields are important components of strategic industries such as new energy, new materials, and new technologies. The market size of China's nanomaterials industry has grown from 48.13 billion yuan in 2014 to 161.48 billion yuan in 2022, with a compound annual growth rate of 16.33%. It is estimated that by 2025, the market size of China's nanomaterials industry will reach nearly 400 billion yuan, of which carbon nanotubes will account for 10%, or about 40 billion yuan. Bucky paper is an emerging market segment of China's nanomaterials industry. According to company surveys, Bucky paper

accounts for 0.57% of carbon nanotubes, which is a market size of 228 million.
