## Abstracts

The global Carbon Nanotube Paste for Li-ion Battery market size is expected to reach \$ 11582 million by 2032, rising at a market growth of 28.0% CAGR during the forecast period (2026-2032).

Carbon Nanotube Paste for Li-ion Batteries is a liquid or slurry material prepared using carbon nanotubes (single-walled or multi-walled CNTs) as the primary conductive filler, through dispersants, solvents, or resin systems. Its core function is to provide a continuous conductive network for lithium-ion battery electrodes, increasing the electron migration rate within the electrodes, thereby improving battery energy density, rate performance, and cycle life. The slurry can be optimized based on parameters such as CNT type, purity, diameter, specific surface area, and solid content to adapt to different lithium battery material systems (such as ternary materials and lithium iron phosphate), while also considering processability and the stability of coating/printing processes. In 2025, global shipments of Carbon Nanotube Paste for Li-ion Batteries reached approximately 512,100 tons, with an average price of about US\$4,496.8 per ton. Single-walled carbon nanotube paste was priced at approximately US\$22,857.14 per ton, while multi-walled carbon nanotube paste was priced at approximately US\$2,571.42 per ton, with gross profit margins ranging from 40% to 50%.

Conductive agents, as key auxiliary materials for lithium-ion batteries, account for a limited percentage of the cost but have a significant impact on battery performance. Commonly used conductive agents for lithium-ion batteries mainly include traditional conductive agents (carbon black, conductive graphite, carbon fiber, etc.) and novel conductive agents (carbon nanotubes, graphene, and their mixed pastes, etc.). With technological maturity, carbon nanotube conductive pastes are gradually replacing traditional conductive agents, becoming the mainstream choice for power batteries and

energy storage batteries. Due to their relatively small proportion of the overall cost, customers are less sensitive to CNT prices, giving them a stable market space in high-end applications. Carbon nanotube slurry is expected to continue to grow in the future along with the development of the lithium battery and functional electronic materials market, and drive the industry toward high-tech added value.
