Abstracts

Carbon nanotubes (CNTs) are allotropes of carbon with a cylindrical nanostructure. These cylindrical carbon molecules have unusual properties, which are valuable for nanotechnology, electronics, optics and other fields of materials science and technology. Owing to the material's exceptional strength and stiffness, nanotubes have been constructed with length-to-diameter ratio of up to 132,000,000:1, significantly larger than for any other material.

Scope of the Report:

This report focuses on the Carbon Nanotubes in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. There has been a significant growth in the use of miniaturized components, particularly for the various consumer electronic devices. Components are being designed to nano-sized physical dimensions, which allow more number of surface mount devices (SMDs) to be placed on a printed circuit board (PCB). Miniaturization has been done in various devices ranging from mobile phones, car engines, computers, and even phone adapters. The growing need for miniaturization of semiconductor components is driving the demand for carbon nanotubes. The manufacturers are using new material combinations to develop ultra-miniaturized semiconductor components. Semiconductor component manufacturers are using carbon nanotube materials as they have excellent electrical properties both as semiconductors and metals. This will further contribute to the growing demand of the market.

The worldwide market for Carbon Nanotubes is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in
