Abstracts

According to our (Global Info Research) latest study, the global Carbon Steel Hot-rolled Coil market size was valued at US\$ 114 million in 2025 and is forecast to a readjusted size of US\$ 150 million by 2032 with a CAGR of 4.1% during review period.

The main raw material of carbon steel hot-rolled coil is carbon steel billet, which can be continuous casting billet or other forms of billet. After the billet is heated to an appropriate temperature, it is rolled through a rough rolling unit and a finishing rolling unit to form a strip. The hot steel strip coming out of the last rolling mill of the finishing rolling is cooled to the set temperature by laminar flow, and then rolled into a steel strip coil by a coiler, that is, a hot-rolled coil. Carbon steel hot-rolled coil is mainly made of carbon steel. According to the carbon content and alloy elements, it can be divided into different types such as ordinary carbon structural steel and low-alloy high-strength structural steel. Because the hot-rolled coil is subjected to high-temperature rolling and cooling treatment, it has the advantages of good plasticity, compressibility and weldability. At the same time, carbon steel hot-rolled coil also has the characteristics of high strength and good toughness, and is easy to process and form.
