## Abstracts

According to our (Global Info Research) latest study, the global Carbon Tetrachloride market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Carbon tetrachloride is a sweet smelling colorless liquid, also known by other names such as tetra chloromethane and carbon tet. Carbon tetrachloride is a vital chemical which was introduced by a French chemist in 1839 and has been an important inorganic chemical since. It is manufactured commercially as a by-product of chlorination of methane. It is synthesized during the manufacturing of other chloromethane products such as dichloromethane. Carbon tetra chloride molecules contains only one carbon atom which is surrounded by four chloride atoms. It is tetrahedral in shape and is highly symmetrical. Tetra chloromethane is a non polar compound similar to methane gas. Carbon tetrachloride is a very good solvent. Being a non polar compound, it readily dissolves other non polar compounds such as oil, fat and iodine.

The increasing demand for agrochemicals as one of the primary growth factors for this market. Carbon tetrachloride is extensively used as an agriculture fumigant and can also be used as mixtures with other fumigants as it has exceptional fire inhibiting properties and penetrating properties. The increase in the need for agricultural sustainability and the increasing yield due to the growing use of fertilizers and pesticides is predicted to drive the global carbon tetrachloride market during the forecast period.
