## Abstracts

According to our (Global Info Research) latest study, the global Carbonate Scale Dissolver market size was valued at US\$ 2072 million in 2025 and is forecast to a readjusted size of US\$ 3033 million by 2032 with a CAGR of 5.6% during review period.

Carbonate Scale Dissolver refers to a chemical formulation designed to remove carbonate-based mineral scale deposits?primarily calcium carbonate (CaCO?), magnesium carbonate (MgCO?), and mixed carbonate salts?that accumulate on surfaces in industrial equipment, pipelines, heat exchangers, boilers, desalination units, and oil & gas wells. These dissolvers typically use acidic or chelating chemistry (such as hydrochloric acid, sulfamic acid, organic acids, phosphonic acids, or specialty chelating agents) to chemically react with and solubilize carbonate scale, restoring equipment efficiency and fluid flow. The supply chain begins upstream with the production of base chemicals and intermediates (mineral acids, organic acids, corrosion inhibitors, surfactants, and chelating agents) from large chemical manufacturers; midstream specialty chemical companies formulate these components into scale-dissolving cleaning fluids, oilfield stimulation chemicals, or industrial descaling agents; downstream distribution occurs through industrial chemical suppliers and oilfield service providers, delivering the products to end users in power generation, oil & gas production, water treatment plants, desalination facilities, industrial manufacturing, and HVAC systems, where the chemicals are applied for maintenance, cleaning, and scale-removal operations. In 2025, global Carbonate Scale Dissolver output was about 1.5 million tons, with 2.2 million tons of capacity. Prices range from USD 1,200 ? 2,200 per ton, with roughly 23% gross margin.
