Carbonitriding is a type of brake disc that has been treated with a special heat treatment process to form a hardened layer rich in carbon and nitrogen on its surface.

Carbonitriding is a thermochemical treatment method that diffuses carbon and nitrogen into the metal surface at high temperatures to increase its hardness and wear resistance. This process is usually carried out in a gas, solid, liquid or plasma medium. Gas carbonitriding is the most common type and is performed by exposing the brake disc to a gas environment containing carbon and nitrogen. Commonly used gases include ammonia and hydrocarbon gases.
