According to our (Global Info Research) latest study, the global Carbonitriding Heat Treatment Service market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Carbonitriding heat treatment service is a surface hardening process in which a part is heated in a furnace with a mixture of carbonaceous material and nitrogen-rich gas. This process diffuses carbon and nitrogen into the surface of the part, creating a hard, wear-resistant layer. Carbonitriding is commonly used to improve the hardness, wear resistance, and fatigue strength of steel parts. It is often used in applications where the part needs to withstand high levels of stress, such as gears, crankshafts, and other automotive components.
