According to our (Global Info Research) latest study, the global Carbonyl Iron Powder and Ultra Fine Iron Powder market size was valued at USD 191.3 million in 2023 and is forecast to a readjusted size of USD 196.5 million by 2030 with a CAGR of 0.4% during review period.

Iron powder is formed as a whole from several other iron particles. The particle sizes vary anywhere from 20-200 μm . The iron properties differ depending on the production method and history of a specific iron powder. There are three types of iron powder classifications: reduced iron powder, atomized powder, and electrolyte iron powder. Each type is used in various applications depending on their properties. There is very little difference in the visual appearances of reduced iron powder and atomized iron powder. Carbonyl iron is a highly pure (97.5% for grade S, 99.5+% for grade R) iron, prepared by chemical decomposition of purified iron pentacarbonyl. It usually has the appearance of grey powder, composed of spherical microparticles. Most of the impurities are carbon, oxygen, and nitrogen. Ultra Fine Iron Powder, in our report, refers to iron powder's particle size is smaller than 10 μm . Ultrafine iron powder has smaller particles, which has a very good electrical magnetic optical effect. This not only affects the sintering properties of the material, but also the final physical properties of the material. Ultrafine iron powder is widely used in the field of electromagnetic shielding & powder metallurgy.

Global Carbonyl Iron Powder and Ultra Fine Iron Powder key players include BASF, JFE, Gripm, Jiangxi Yuean, Jilin Jien, etc. Global top five manufacturers hold a share about 70%.
