The global Carboxyl-Modified Polystyrene Latex Particles market size is expected to reach \$ 66.05 million by 2032, rising at a market growth of 5.1% CAGR during the forecast period (2026-2032).

Carboxyl-Modified Polystyrene (PS) Latex Particles are polystyrene microspheres that have been chemically functionalized with carboxyl (COOH) groups on their surface. This surface modification enhances their hydrophilicity, colloidal stability, and provides reactive sites for covalent bonding with biomolecules, polymers, or other chemical agents. These particles are widely used in biomedical research, immunoassays, drug delivery, and as calibration standards in particle size analysis. In 2025, global Carboxyl-Modified Polystyrene Latex Particles production reached approximately 15500 L, with an average global market price of around 2800 USD/L. The production capacity for Carboxyl-Modified Polystyrene Latex Particles in 2025 was approximately 20000 L. The typical gross profit margin for Carboxyl-Modified Polystyrene Latex Particles between 20% and 40%.

The Carboxyl-Modified Polystyrene Latex Particles market is driven by increasing demand in biomedical research, diagnostics, and drug delivery applications. Rising adoption in immunoassays, cell sorting, and biosensor development fuels market growth. North America and Europe hold significant shares due to advanced research infrastructure, while the Asia-Pacific region is experiencing rapid growth driven by expanding biotechnology and pharmaceutical sectors.
