Carburetor is the device inside an internal combustion engine that provides the area for air and gasoline to mix them together so that the engine runs properly. If there is not enough fuel mixed with the air, the engine 'runs lean' and either will not run or potentially damages the engine. If there is too much fuel mixed with the air, the engine 'runs rich' and either will not run (it floods), runs very smoky, runs poorly (bogs down, stalls easily), or at the very least wastes fuel.

The carburetor industry is a sunset industry for motorcycle & powersports. The top three players of global Carburetor include Keihin Group, Mikuni and Zama, with about 47% market shares. Japan is the largest consumption place, with a consumption market share nearly 42%. Following Japan, China is the second largest consumption place with the consumption market share of 30%.
