Abstracts

According to our (Global Info Research) latest study, the global Carburetors market size was valued at US\$ 1174 million in 2024 and is forecast to a readjusted size of USD 1273 million by 2031 with a CAGR of 1.2% during review period.

Carburetor is the device inside an internal combustion engine that provides the area for air and gasoline to mix them together so that the engine runs properly. If there is not enough fuel mixed with the air, the engine 'runs lean' and either will not run or potentially damages the engine. If there is too much fuel mixed with the air, the engine 'runs rich' and either will not run (it floods), runs very smoky, runs poorly (bogs down, stalls easily), or at the very least wastes fuel.

Japan is the largest market with about 42% market share. China is follower, accounting for about 30% market share.
