## Abstracts

The global Card Based Access Control Systems market size is expected to reach \$ 5555 million by 2032, rising at a market growth of 5.5% CAGR during the forecast period (2026-2032).

Card-based access control systems are security control systems that manage access permissions by reading ID card information. They typically consist of a card reader, controller, ID card, and backend management software. Access is controlled by verifying the identity of personnel. They are widely used in residential communities, office buildings, factory parks, schools, and public facilities. Based on estimates of security equipment shipments and building-related demand, global sales of card-based access control systems in 2025 were approximately 78 million units, with an average unit price of approximately US\$48 and a capacity utilization rate of approximately 77%. The upstream of the industry chain mainly includes chip design companies, RFID module manufacturers, electronic component suppliers, and plastic and metal structural component manufacturers. The midstream consists of access control equipment manufacturers and system integrators. The downstream covers real estate developers, property management companies, industrial parks, government agencies, schools, and transportation hub operators. The overall gross profit margin is approximately 29%, with companies possessing brand and system integration capabilities reaching 36%. The product cost structure mainly consists of the main control chip and... Radio frequency modules account for approximately 28%, card readers and control boards for approximately 20%, structural components and housings for approximately 15%, software and system development for approximately 12%, installation and debugging for approximately 10%, channels and logistics for approximately 8%, and other costs for approximately 7%. On the demand side, the downstream demand list includes access control for residential communities, security management for office buildings, personnel

management for industrial parks, security needs for schools and public institutions, and access control needs for transportation hubs. The downstream customer list includes real estate developers, property management companies, corporate park managers, government agencies, schools, and transportation infrastructure operators. On the business opportunity side, policy drivers include smart city construction, improvements to public safety systems, and increased requirements for digital management. Technological innovation drivers are reflected in multi-card fusion technology, cloud platform management, mobile identity authentication, and the integration with facial recognition. Changing consumer demands are reflected in users shifting from simple card swiping to contactless, convenient, and multi-scenario integrated experiences, while also placing higher demands on system security and stability.

**Card-based Access Control System** As a crucial component of the traditional security industry, systems are currently undergoing an upgrade from single identification methods to multi-technology integration. Despite the rapid development of new technologies such as facial recognition and mobile authentication, card-swipe access control systems, with their advantages of low cost, high stability, and high maturity, continue to be widely used in a large existing market, particularly in residential communities, industrial parks, and small and medium-sized commercial settings. Looking at industry trends, the future market will see both replacement of existing systems and upgrades in new ones. On the one hand, the demand for updating older access control systems continues to grow; on the other hand, new projects are increasing their requirements for intelligence and networking, driving products towards cloud platform management and multi-identity integration. From a competitive perspective, the industry has many participants, with fierce competition in the low-to-mid-end market and significant price pressure. Companies with system integration and platform service capabilities have a greater advantage. The key to future industry development lies in improving system security, compatibility, and scalability, while also enhancing added value through deep integration with smart communities, smart buildings, and IoT systems. In the long term, card-swipe access control systems will not be completely replaced but will coexist as a basic identification method with other technologies. The industry as a whole is showing a development trend of stable demand and technological upgrades in parallel.
