The global Card Edge Liquid Crystal Polymer Connectors market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Liquid crystal polymer (LCP) is a type of aromatic polymer. They are extremely chemically resistant, thermally resistant, and chemically inert. They can replace metals, ceramics, composites, and many other traditional materials because of their superior properties. They are mainly useful for mechanical and electrical parts because of their high strength and inertness. Card edge liquid crystal polymer (LCP) connectors are also known as edge card liquid crystal polymer (LCP) connectors. These connectors are fixed devices that mate with the edges of the double-sided and single-sided printed circuit boards to provide an external connection.
