Abstracts

Cath labs or cardiac catheterization laboratories in hospitals conduct both diagnostic and therapeutic procedures. These laboratories are used to conduct normal procedures such as the monitoring of blood flow and heart pressure. Advances in catheterization technology such as robot-assisted catheterization for cardiac catheterization have advanced the digital imaging system. One driver in market is growing focus on clinical trials. Vendors are using advanced technologies to develop innovative ablation catheters. They invest in R&D to develop cost-effective and efficient devices and lower manufacturing costs. Many of these devices are awaiting approval across different countries.

Scope of the Report:

This report focuses on the Cardiac Ablation in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. One of the primary drivers for this market is the rise in the adoption of minimally invasive procedures with improved medical imaging. Medical facilities across the world are shifting toward minimally invasive procedures, which involve the use of radiotherapy and imaging technologies and expand the treatment options for cardiac diseases such as atrial fibrillation. Through imaging, the anatomy of the heart can be studied, which helps the physician diagnose and conduct cardiac ablation procedure. For instance, fluoroscopy imaging is used for most of the complex atrial fibrillation procedures; fluoroscopy imaging modality is used to guide the catheter and improve the surgical outcome. These advantages of medical imaging are expected to propel growth in the global cardiac ablation market during the forecast period.

The emerging markets including China, India, Brazil, and Mexico have become attractive destinations for companies engaged in the development, manufacturing, and distribution of cardiac ablation products. A number of factors such as success of microwave ablation procedure in clinical trials to treat atrial fibrillation, growing adoption of ablation in CVS disease treatment, and growing market penetration of ablation product manufacturers across developing countries are offering high growth opportunities for the players' active in the Cardiac ablation market.

The worldwide market for Cardiac Ablation is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
