According to our (Global Info Research) latest study, the global Cardiac Biomarkers market size was valued at USD 724.6 million in 2023 and is forecast to a readjusted size of USD 1310.7 million by 2030 with a CAGR of 8.8% during review period.

Cardiovascular diseases are leading cause of morbidity and mortality globally. Biomarkers are generally used as an indicator for particular diseases such as rheumatic and congenital heart diseases and cardiac arrhythmia. Cardiac biomarkers are measurable and quantifiable biological parameters. These are specifically used to check the presence or severity of cardiovascular diseases. Cardiac biomarkers are the substances that are released into blood when heart is damaged. These biomarkers are also used for diagnosing and monitoring diseases such as coronary syndrome or cardiac ischemia. The symptoms of these diseases includes chest pain, shortness of breath and nausea that ultimately leads to heart attack or angina. Cardiac biomarker tests helps to detect presence of coronary syndrome and cardiac ischemia to evaluate its severity and diagnosis.

The prevention of cardiac diseases by monitoring the heart conditions via cardiac biomarker testing is the profound approach for obtaining rapid results for immediate diagnosing and treatment. Cardiac biomarkers are protein-based traceable substances used as an indicator of biologic state and used for diagnostic and prognostic purposes associated with heart. Cardiac biomarkers are used as risk stratification for various cardiovascular diseases (CVDs), which include myocardial infraction, congestive heart failure, acute coronary syndrome (ACS) among others. The cardiac biomarkers that are widely used as an integrated diagnostic approach for CVDs include CK-MB, troponin I and T, myoglobin, BNP, IMA and few others. Cardiac biomarkers market has witnessed a greater demand over the past five to six years.
