According to our (Global Info Research) latest study, the global Cardiac Imaging market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Cardiac imaging comprises intravascular ultrasound, echocardiogram and coronary catheterization. Intravascular ultrasound is an imaging technique carried out with the help of specially designed catheters attached to computerized ultrasound equipment to visualize the lumen and interior wall of blood vessels. Echocardiogram is a test that uses two-dimensional, three-dimensional, and Doppler ultrasound to create images of heart. Coronary catheterization is a minimally invasive procedure utilized for pressure monitoring and blood sampling with the help of catheter inserted in the heart.

According to market experts, the increasing prevalence of cardiovascular diseases in the developing regions such as South America and Asia are driving the market growth. North America was observed to be the largest market due to updated reimbursement policies, easy accessibility to modern diagnostic and high diagnostic costs.
