According to our (Global Info Research) latest study, the global Cardiac Prosthetic Devices market size was valued at USD 8794.2 million in 2023 and is forecast to a readjusted size of USD 13960 million by 2030 with a CAGR of 6.8% during review period.

Prosthetic devices are used to replace or support the function of an original organ. Cardiac prosthetic devices such as implantable cardiac pacemakers and heart valves are used to maintain/restore proper functionality of heart in people with chronic cardiovascular disorders such as heart attack and valvular diseases. Heart valves are used in patients with heart valvular disease or dysfunctional heart valves. Implantable cardiac pacemakers are used to treat most commonly atrial fibrillation, a common heart condition where the heart beats too fast or too slow or in an irregular way. It is commonly seen in older adult population.

Cardiac prosthetic devices is an ever-growing market due to increasing prevalence of cardiac disorders. For instance, around 5 million American population is diagnosed with heart valve disorders every year. Moreover increasing adoption rate for these devices along with increasing geriatric population and the unhealthy living style of the current generation will propel the growth of market. Whereas high cost of these devices restrains the growth of market.
