## Abstracts

Prosthetic devices are used to replace or support the function of an original organ. Cardiac prosthetic devices such as implantable cardiac pacemakers and heart valves are used to maintain/restore proper functionality of heart in people with chronic cardiovascular disorders such as heart attack and valvular diseases. Heart valves are used in patients with heart valvular disease or dysfunctional heart valves. Implantable cardiac pacemakers are used to treat most commonly atrial fibrillation, a common heart condition where the heart beats too fast or too slow or in an irregular way. It is commonly seen in older adult population.
