## **Abstracts**

According to the WHO, cardiovascular disease is one of the leading cause of death worldwide. It is estimated that around 17.5 million people died from cardiovascular disease, which accounted for 31% of all global deaths in 2012. Cardiovascular disease can be prevented by addressing behavioral risks such as obesity, cigarette smoking, and an unhealthy diet. CRT device is an implantable medical device that are used to resynchronize the contractions of the heart's ventricles by sending tiny electrical impulses to the heart muscle, to pump the blood more efficiently.

Scope of the Report:

This report focuses on the Cardiac Resynchronization Therapy (CRT) Devices in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

One of the various factors that back the market growth of cardiac resynchronization therapy devices market is the expanding pool of aging and geriatric patients worldwide. That segment of the human population is more vulnerable to chronic illness and is, as such, expected to generate the immense need for these resynchronization therapy gadgets so as to facilitate and accelerate sound heart activity. Other than cardiac arrest, there are some other medical conditions like atrial fibrillation, congenital heart disease, and arrhythmias which also require the implementation and usage of these cardiac resynchronization therapy devices.

Growing prevalence of various cardiovascular diseases like cardiac arrest, sick sinus

syndrome, and bradycardia are also bolstering the growth of market. To diminish the rate of mortality arising out of cardiovascular illness, many hospitals have already initiated the use of CRT-Ps for managing the failures of heart. Furthermore, many doctors are increasing the usage of surgeries that are minimally invasive (MI) for various CRT-Ps implantation. These procedures are considered safe, diminish the blood transfusion requirement. It also decreases chances of infections and reduces stay at the hospital. This eventually accelerates the recovering and process thereby leading to much improved clinical outcome. This change in inclination towards minimally invasive procedures for the purpose of CRT-Ps implantation is poised to trigger the sales of the cardiac resynchronization therapy devices in the years to come. The North American region is expected to contribute the highest revenue over the forecast period due to rising approvals by the U.S. FDA for new products and increasing growth of geriatric population suffering from cardiac dysfunction. As of 2016, it held more 36.0% of the global market share. Europe also held a substantial share and is predicted to witness lucrative growth with CAGR of more than 7.4% over the next nine years. Higher stringency being implemented by the healthcare agencies toward R&D, safety guideline follow-up, and product approvals are expected to drive the growth. The worldwide market for Cardiac Resynchronization Therapy (CRT) Devices is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
