## Abstracts

According to our (Global Info Research) latest study, the global Cardiopulmonary Resuscitation Pump market size was valued at US\$ 139 million in 2025 and is forecast to a readjusted size of US\$ 195 million by 2032 with a CAGR of 4.9% during review period.

In 2025, global cardiac compression pump production reached approximately 54 k units, the average price is 2500 usd/unit. Cardiac compression pump is an automatic medical device used for emergency treatment of cardiac arrest. Its core function is to replace manual continuous, standard and efficient chest compressions. Through an adjustable back plate and pneumatic compression head, the equipment simulates the action of professional bare-handed cardiopulmonary resuscitation, and automatically compresses the lower half of the patient's sternum at a set depth and frequency, so as to maintain the blood circulation of the patient's important organs during the golden rescue time and gain time for recovering the spontaneous heartbeat.
